Attorney Docket No.: M-9875 US

WHAT IS CLAIMED IS:

Ţ	1. A mobile computing system comprising of:		
2	a communication device;		
3	a personal computing system (PC) comprised of		
4	a storage device capable of receiving and storing messages from the		
5	communication device; and		
6	a personal digital assistant system (PDA) comprised of		
7	a storage device capable receiving and storing messages from the		
8	communication device, whereby the storage device of the PC is capable of		
9	synchronizing received messages with the storage device of the PDA.		
1	2. The mobile computing system of claim 1 wherein the storage device of the		

- stem of claim 1 wherein the storage device of the PC is a memory array comprised of a set of records, and the storage device of the PDA is a memory array comprised of a set of records.
- The mobile computing system of claim 2 wherein a direct correspondence is 3. 2 established between the set of records of the PC memory array and the set of records of the 3 PDA memory array.
- The mobile computing system of claim 2 wherein messages are synchronized 1 between the memory array of the PC and the memory array of the PDA.
- 1 5. The mobile computing system of claim 3 wherein messages are synchronized between records of the PC memory array and records of the PDA memory array. 2
- 6. 1 The mobile computing system of claim 1 wherein the storage device of the PC 2 is a hard disk drive.

-11-

697206 v2

1	7. The mobile computing system of claim 6 wherein the hard disk drive is
2	comprised of a memory array, and the PDA storage device is comprised of a memory array,
3	·
	The second of th
1	8. A mobile computing system comprising of:
2	a communication device;
3	a personal computing system (PC) capable of receiving messages through the
4	
5	a personal digital assistant system (PDA) capable of receiving messages through the
6	communication device and synchronizing the messages with the PC.
1	9. The mobile computing system of claim 8 wherein the PDA is further
2	comprised of a memory array where messages are received and entered, and the memory
3	array is synchronized to the PC. 10. The mobile computing system of claim 9 wherein the PC is further comprised
1	10. The mobile computing system of claim 9 wherein the PC is further comprised
2	of a memory array that is synchronized to the memory array of the PDA.
	The mobile computing system of claim 9 wherein the PC is further comprised
2	of a hard disk drive that is synchronized to the memory array of the PDA.
1	12. A method of clearing and archiving messages in a dual system computer
2	architecture comprised of:
3	receiving and storing messages by a first computer system to a first memory device;
4	synchronizing the messages with a second computer system, whereby the second
5	computer system archives synchronized messages to a second memory device;
6	and

filled.

- 13. The method of clearing and archiving messages in a dual system computer architecture of claim 12 further comprising:
- 3 identifying the deleted messages in the first memory devices.
 - 14. The method of clearing and archiving messages in a dual system computer architecture of claim 12 wherein the first computer system is a personal digital assistant system (PDA) and the second computer system is a personal computer system (PC).
 - 15. The method of clearing and archiving messages in a dual system computer architecture of claim 13 wherein the first computer system is a personal digital assistant system (PDA) and the second computer system is a personal computer system (PC).
 - 16. A method of clearing and archiving messages in a dual system computer architecture comprised of:

receiving and storing messages by a first computer system to a first memory device; synchronizing the messages with a second computer system, whereby the second computer system archives synchronized messages to a second memory device; and

informing a user whenever the first memory device is filled.

- 17. The method of clearing and archiving messages in a dual system computer architecture of claim 14 further comprised of:
 - deleting messages from the first memory device after the messages have been read by the user.
- 18. The method of clearing and archiving messages in a dual system computer architecture of claim 16 wherein the first computer system is a personal digital assistant (PDA) and the second computer system is a personal computer system (PC).
- 19. The method of clearing and archiving messages in a dual system computer architecture of claim 17 wherein the first computer system is a personal digital assistant (PDA) and the second computer system is a personal computer system (PC).
